Crypto Meta Radar Boosterpad for BSC projects

A marketplace that connects quality projects & quality investors.

Abstract

CMR's vision is to increase the current quality of Blockchain projects by providing a suite of tools to browse, trade & monitor safe projects. Alt coin & Shit coin space has witnessed a tremendous growth in the recent times thanks to the success of projects like Doge, Safemoon & many others that followed suit. Often there are stories of investors who invested small amount in these coins and have become millionaires in few months. The reality however is slightly different from this. With the rise in popularity in this space, there is also an alarming rise in the number of scams. Numerous people have become victims to scam projects & rugpulls trying to make money by investing in a rush. CMR is an idea born out of this issue. We want to address this problem by providing key trust indicators to investors which they can use to analyse a project and decide whether or not to invest.

Ecosystem

Token Whitelisting

Early Gem Notifications

Portfolio Management

Customised DeX

Trust Indicator Dashboard

Staking pad

Token Locker & vester

Buy Crypto with Card

Casino & Games

Advantages of Using CMR

Boosterpad
Projects creators will be able to use our services to add key functionality to their project like fully customised DeXs, Dapps and provide utility to their tokens by adding their token to our casino & games. Some of our key clients include BabyDogeCoin, BabyShibaInu, Tiki Finance, etc.,

Early Notification about Safe projects
Two key ingredients to make profit in any crypto investment are to invest in a good quality project and to invest as early as possible. Our Gem Notifier will aim to notify all our holders about promising projects as soon as they are whitelisted enabling them to jump on early

Trust Indicators
Investors can look at key metrics for a project and make informed decisions before investing in a token/project.

Porfolio management
Investors will be able to access their investments, see rewards, calculate their profits & losses all under our Portfolio management Dapp.

Launchpad, Stakingpad & more
Project creators can use our services to launch their tokens, lock Liquidity, vest tokens, provide staking functionality to their token.

$CMR Token

$CMR is a utility token that will be at the core of our ecosystem. The features that we are currently offering(DeX, Buy Crypto, Dashboard, Donate, Casino) will have to be bought by CMR tokens. We plan to extend these features further to become a one stop boosterpad solution for all BSC projects. 90% of the revenue generated from these services will go into staking & burning, benefiting the holders. Alsso, holders of CMR tokens will get early GEM notifications from us to help them jump onto a project before anyone else does! We essentially want to help people build safe & quality projects and connect investors to those projects! CMR lies at the center of this ecosystem!

Token features

Deflationary

CMR is deflationary. There is a 2% tax on every transaction that goes directly into the BURN wallet.

Anti Dump

CMR is anti-dump. When the anti-dump feature is enabled, buyers will not be able to dump their tokens until a cooldown period has passed. This is set to 60 minutes.

Initial Stability

CMR token starts off with a higher tax of 20% in the initial days making it a difficult choice for early entrants to sell their tokens. The tax rate cools of over a period of 2 months and settles down at 2%.

Tokenomics

Total Supply – 4,000,000,000 CMR

Operations: 360,000,000

Private Sale: 400,000,000

Marketing: 360,000,000

Pre sale: 800,000,000

Team: 480,000,000
